

Participation and Publication Consent Form

Sycom Academy · GRC/SOC Internship Programme

Read `CONSENT-AND-PUBLICATION.md` before completing this. Ask anything you are unsure about before you sign. There is no deadline pressure on this decision and no consequence to any answer.

Return it privately to the programme lead, see Part 6. Do not commit it to this repository or open a pull request with it. This repository is public and your answer is nobody else's business, including the other interns'.

Part 1: About you

Full name	
Email	
Programme cohort	
Date	

Part 2: What you are being asked

Sycom Academy runs this programme in a GitHub repository that will be public, readable by anyone on the internet, including search engines and future employers.

If you take part publicly, the following become permanently world-readable:

- Every document you write during the programme
- Every commit message, pull request and review comment you write
- The author name and email recorded in your git commits
- Your GitHub account, and the times of day you worked

This cannot be undone. Other people can copy the repository, search engines cache it, and archive sites keep copies. If you later change your mind, Sycom Academy can make its own copy private or delete it, but cannot remove copies held by anyone else. Please be sure you understand this before choosing.

Your marks, feedback and certificate are never published in any case. They are held privately and can be deleted on request.

Part 3: Your choice

Choose one. Your assessment, feedback, mentor time and certificate are identical in all three. No option is better regarded than another and your choice is not shared with other interns.

- ☐ Mode A: Attributed. My work is public under my real name and my own GitHub account. I understand this is permanent and cannot be reversed.
- ☐ Mode B: Pseudonymous. *(default)* My work is public, but under a pseudonymous account not linked to my name. I can prove the work is mine to an employer privately, whenever I choose. I understand the work itself is permanent.
- ☐ Mode C: Private. My work is not published. It stays in a private repository seen only by my mentors. I understand I may choose to publish later, and that this is the only option I can change my mind about.

If you return this form without a box ticked, you will be placed in Mode B.

Part 4: Confirmations

Tick each to confirm.

- ☐ I have read `CONSENT-AND-PUBLICATION.md`
- ☐ I understand that published work cannot reliably be unpublished, even if I withdraw consent later
- ☐ I understand my marks, feedback and certificate are never published
- ☐ I understand my choice does not affect my assessment, my certificate, or how I am treated on the programme
- ☐ I understand I can ask questions, change my answer before the programme starts, and that saying no to publication carries no consequence
- ☐ I am 18 or over

Part 5: Signature

Signature	
Date	

Part 6: How to return this

Send the completed form privately to the programme lead, by email or any private channel you already use with them. A photograph or scan of a printed copy is fine. So is a typed version: the words matter, the format does not.

Do not:

Do not	Why
Commit it to this repository	It is public. Your mode would be readable by anyone, permanently
Open a pull request containing it	Same, and you have no write access yet, nobody does before their form is recorded
Send it to a mentor	Mentors are told which repository you work in and nothing else. Your choice is not theirs to know
Send it in a group email or shared thread	Your answer is individual and private. <code>CONSENT-AND-PUBLICATION.md</code> §5.3

The programme lead files it in the private assessment repository. You will not have access to that repository and are not meant to.

If you do not return a form, you are placed in Mode B: pseudonymous. Nobody will chase you into a different answer, and silence is never read as agreement to publish under your real name.

Part 7: For the programme lead

Form received	
Mode recorded	
Git author name and email verified before first push (<i>modes A and B</i>)	
Pseudonymous account created and handed over (<i>mode B</i>)	
Repository access granted	

Filed in `SYCOM-INTERNSHIP-ASSESSMENT/Consent/`. Never in the public repository, and never shared with mentors or with other interns: they are told which repository or fork a given intern works in, and nothing else.

Withdrawing or changing your mind

Contact the programme lead at any time.

You want to	Possible?
See what is held about you	Yes, in full
Delete your marks and feedback	Yes, in full
Move from Mode C to A or B	Yes
Move from A or B to Mode C	Sycom's own copy can be made private or deleted. Copies already taken by others cannot be recalled
Correct something published	Only by adding a correction. The original stays in the history and in any fork

You can also complain to the Information Commissioner's Office at ico.org.uk.
